

RUN THE APPLICATION

Date	14 Oct 2022
Team ID	PNT2022TMID18651
Project Name	Virtual Eye - Life Guard For Swimming Pools To Detect Active Drowning

1. Switch to the z/OS Projects perspective.
2. Define a launch configuration that includes specific environment variables or input parameters for the executable file.
 - a. On the workbench toolbar, click the Run icon and select Run.
 - b. In the configurations list, click Compiled Application, then click the New launch configuration icon.
 - c. In the Name field, type a name for the launch configuration. This name is added to a list of options under a Run With Configuration menu. Choose a name that you can associate with the program, input parameters, and environment variable values that are defined in the launch configuration
 - o On the Main tab, define the Project, Program name, and Program parameters in the respective fields.
 - o On the System Environment tab, specify values for environment variables that the executable file queries at run time.
 - o On the Common tab, define the type of launch configuration and the perspective you want to use for each launch mode.
3. Click Apply and Close.
4. Run the program.
 - . In the Projects view, find the executable file that you want to run.
 - Right-click the executable file and select Run With Configuration > (launch configuration name you defined previously).
